

SNOW-THROWERS

SNOW BREEZE RS

Snow Breeze RS

A silent single-stage snow-thrower with large snow-intake.

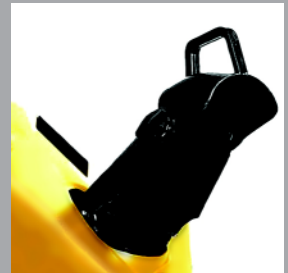

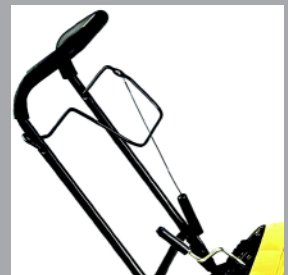

An environment friendly four stroke engine makes this machine about 50 % more silent compared to snow-throwers equipped with 2-stroke engines.

A rubber-coated spiral makes the ground clear from snow all the way down to the asphalt or paving stones. The spiral also drives the machine forward. The snow is ejected about 8 metres.

The machine has large controls making it easy to operate even with the gloves still on. The direction of the ejector is comfortable adjusted from the handle.

A foldable handle makes the machine easy to store and transport.

Equipped with a silent four-stroke 5,0 hp engine. Working width 55 cm.
